

Janadri Yalla Yashwanth

C++ Developer | OOP · Data Structures & Algorithms · Problem Solving

yallayashwanth99@gmail.com | +91 8790819924 | [LinkedIn](#) | [GitHub](#) | Hyderabad, India 500001

SUMMARY

2025 B.Tech CS graduate with a strong programming foundation in C++, C, and Python, and solid command of OOP and data structures & algorithms. Currently a software engineer at Marut Drones, where I write clean, modular code, debug production issues, and collaborate in a fast-moving team. Strong logical and analytical thinking, and eager to grow as a C++ developer. No backlogs; immediate joiner, open to relocation.

TECHNICAL SKILLS

Languages: C++, C, Python, Java, SQL

C++ & OOP: Classes & objects, inheritance, polymorphism, encapsulation, STL, pointers & memory management, references

CS Fundamentals: Data Structures & Algorithms, Operating Systems, DBMS, problem solving

Software Practices: Clean code, debugging, testing, Git version control, Agile collaboration

Also worked with: FastAPI, React, Docker, Linux, OpenCV, PyTorch

Tools: Git & GitHub, VS Code, GCC / g++, Claude Code, Docker, Linux

EXPERIENCE

Software Engineer Trainee — Marut Drones

Feb 2026 – Present

- Software engineer on the AI/automation team building production systems — writing clean, modular code, applying OOP design, debugging production issues, and collaborating on design and delivery.
- Built backend services and data pipelines (FastAPI, Celery/Redis) with version control, code review, and testing best practices.
- Diagnosed and resolved production failures (environment/config mismatches, deployment issues) to keep systems stable.

Machine Learning Intern — Rومان Technologies

Jan 2025 – Mar 2025

- Built and evaluated a machine-learning classification model on healthcare data, reaching 98% accuracy.

PROJECTS

Flight Log Analyzer — Binary Log Parser & Diagnostics

Binary parsing (byte-level struct), Python, Docker

- Wrote a binary parser from scratch for a self-describing log format, decoding 50+ message types with byte-level parsing, bit fields, and timestamp reconstruction.
- Implemented a 50+ check diagnostic engine and packaged the app with Docker (~7,200 lines, solo-built).

Autonomous Precision Landing — Real-Time Control

Real-time control loops, state machines, MAVLink, Python

- Designed a real-time control loop and multi-mode state machine (visual control, GPS navigation, hover fallback) running at 20 Hz for autonomous drone landing.
- Handled coordinate geometry, velocity limits, and safety fallbacks, achieving ~5-10 cm landing accuracy.

EDUCATION

Sri Venkateswara College of Engineering, Tirupati

Dec 2021 – May 2025

B.Tech in Computer Science (Artificial Intelligence & Machine Learning) — CGPA: 8.6

Narayana Junior College, Hyderabad

Jun 2019 – Mar 2021

Intermediate (MPC) — 96%

CERTIFICATIONS

- CS50's Introduction to Programming with Python — Harvard University Online
- Databases: Topics in SQL — Stanford Online
