SUMMARY

Data scientist and 2025 CS (AI & ML) graduate, CGPA 8.6, who applies machine learning, statistical modeling, and data analysis to real problems. At Marut Drones I train, evaluate, and deploy ML models on drone and aerial data, and I've built classification and prediction models across healthcare and NLP. Strong in Python (pandas, NumPy, scikit-learn, PyTorch) with a focus on turning data into actionable insights. Immediate joiner.

TECHNICAL SKILLS

Languages: Python, SQL

Machine Learning: Classification, regression, clustering, deep learning, model training & evaluation

ML Libraries: scikit-learn, PyTorch, TensorFlow, OpenCV, YOLO

Data Analysis: pandas, NumPy, data cleaning, feature engineering, EDA, Matplotlib

Statistics: Statistical modeling, hypothesis-driven analysis, metrics (accuracy / precision / recall)

Data & Deployment: SQL, data pipelines, Jupyter, Git, Docker, FastAPI (model serving)

Tools: Git & GitHub, Jupyter, Claude Code, VS Code, Docker, Linux

EXPERIENCE

Software Engineer Trainee — Marut Drones

Feb 2026 – Present

- Trained, validated, and deployed machine-learning models (object detection, segmentation) on drone and aerial imagery, owning the pipeline from data preparation to production serving.
- Built data pipelines that clean, transform, and analyze large geospatial datasets (imagery + elevation) to produce actionable outputs — areas, volumes, and counts.
- Applied model evaluation and error analysis and benchmarked multiple models to select the best performer for each detection task.
- Collaborated with cross-functional teams to turn raw drone data into business-relevant insights.

Machine Learning Intern — Rooman Technologies

Jan 2025 – Mar 2025

- Built and evaluated a sleep-disorder classification model on physiological and behavioral data using Python and TensorFlow, achieving 98% accuracy after data cleaning and feature engineering.

PROJECTS

Heart Disease Prediction

Python, scikit-learn, pandas

- Trained classification models on clinical features (age, blood pressure, cholesterol, heart rate) to predict heart-disease risk, with data cleaning, feature engineering, and model evaluation.

Twitter Sentiment Analysis

Python, NLP, TF-IDF, scikit-learn

- Classified tweets into positive / negative / neutral using NLP preprocessing (tokenization, stop-word removal) and TF-IDF features; evaluated model performance for customer-feedback insight.

Custom Object Detection with YOLO

Python, YOLO (Ultralytics), PyTorch, OpenCV

- Trained custom YOLO detectors on self-labeled datasets (vehicle, number-plate, water, fence), owning data annotation, augmentation, and validation.

EDUCATION

Sri Venkateswara College of Engineering, Tirupati

Dec 2021 – May 2025

B.Tech in Computer Science (Artificial Intelligence & Machine Learning) — CGPA: 8.6

Narayana Junior College, Hyderabad

Jun 2019 – Mar 2021

Intermediate (MPC) — 96%

CERTIFICATIONS

- CS50's Introduction to Programming with Python — Harvard University Online

- [Databases: Topics in SQL — Stanford Online](#)
