

Janadri Yalla Yashwanth

Security Operations (SOC) Analyst | Log & Event Analysis · Networking · Python · Linux

yallayashwanth99@gmail.com | +91 8790819924 | [LinkedIn](#) | [GitHub](#) | Hyderabad, India 500001

SUMMARY

Computer Science graduate (2025) moving into security operations, with a strong foundation in networking, Linux, and log/event analysis. I built an automated log-analysis and anomaly-investigation engine that triages events, separates false positives from real anomalies, and documents findings — the same analytical workflow behind SOC monitoring and incident triage. Strong Python and analytical skills; actively upskilling toward CompTIA Security+ and hands-on SOC labs. Willing to work 24/7 shifts; immediate joiner.

TECHNICAL SKILLS

Security & SOC: Log & event analysis, event triage, false-positive filtering, incident investigation & documentation, phishing/email awareness; SIEM & incident response (actively learning)

Networking: TCP/IP, DNS, HTTP/S, OSI model, VPN & firewall concepts, network & log analysis

Systems: Linux, Windows, systemd, command line, service & system troubleshooting

Scripting & Tools: Python (automation & analysis), Bash, Git, Docker

Fundamentals: Operating Systems, Computer Networks, DBMS, Data Structures & Algorithms

Strengths: Analytical & investigative mindset, attention to detail, clear communication, calm under pressure

Tools: Git & GitHub, Linux, Python, VS Code, Wireshark & Splunk (learning), TryHackMe / LetsDefend labs

EXPERIENCE

Software Engineer Trainee — Marut Drones

Feb 2026 – Present

- Software engineer operating production systems on Linux — analyzing logs, investigating failures, and tracing root causes across services, then documenting findings for the team.
- Built and maintained backend services and data pipelines with version control, monitoring, and incident-style troubleshooting under time pressure.
- Communicated technical issues and resolutions clearly to both technical and non-technical teammates.

Machine Learning Intern — Rooman Technologies

Jan 2025 – Mar 2025

- Analyzed and modeled healthcare data in Python, applying a detail-oriented, evidence-based approach to reach reliable conclusions.

PROJECTS

Flight Log Analyzer — Automated Log Analysis & Anomaly Investigation

Python, log parsing, anomaly detection, reporting

- Built a platform that ingests raw logs, decodes them, and runs a 50+ check engine to triage events — separating false positives from genuine anomalies and investigating probable root causes.
- Reverse-engineered an encrypted (XOR-obfuscated) binary log format to enable analysis, then generated structured investigation reports — mirroring SOC log analysis, triage, and incident documentation.

EDUCATION

Sri Venkateswara College of Engineering, Tirupati

Dec 2021 – May 2025

B.Tech in Computer Science (Artificial Intelligence & Machine Learning) — CGPA: 8.6

Narayana Junior College, Hyderabad

Jun 2019 – Mar 2021

Intermediate (MPC) — 96%

CERTIFICATIONS

- CS50's Introduction to Programming with Python — Harvard University Online
- Databases: Topics in SQL — Stanford Online
